

PROTECT YOUR PILE FROM EROSION

GreenCarpet Pile Sealer

GreenCarpet blends polymeric emulsion binding agents and recycled cellulosic material to help protect inactive piles and ground covers.

Non-toxic and non-corrosive, GreenCarpet offers superior cohesion, durable water resistance, and reduced air/water ingress. With its environmentally-friendly composition and distinctive colors, it contributes to improved community relations.

Application is easy. The pile is first compacted to prevent erosion and reduce the oxygen that could cause spontaneous combustion. Batches are then mixed onsite and loaded into a hydroseeder for spraying with the treatment.

In as little as 48 hours, GreenCarpet cures into a protective shell that is resistant to shifting, sink failures, and material run-off / erosion.

**FORMS A
HARD CRUST**

FEATURES & BENEFITS

- Stabilizes in less than 48 hours
- Non-toxic, non-corrosive
- Surface forms a crust which is resistant to shifting, sink failures, and material runoff/erosion
- Provides a rain-resistant, windproof surface that minimizes frozen material, oxidation, and inventory and energy loss
- Will not pollute groundwater
- Helps to ensure EPA compliance

REMOTE CONTROL & INTERNAL CAMERA
